

DRISHYAM

From Footage to Action

API Specification

REST + WebSocket Endpoints

Document ID: DRISHYAM-API-001

Version: 1.0 | 13 September 2026

Confidential – For Development Use Only

1. General Conventions

- Base URL: `https://api.drishyam.example/v1`
- Auth: Bearer JWT in Authorization header
- Content-Type: `application/json`
- Error format: `{ "error": { "code": "STRING", "message": "Human readable", "details": {} } }`
- Pagination: `?page=1&limit=20` → `{ data: [], meta: { page, limit, total } }`

2. Authentication Endpoints

POST /auth/login — email, password → access_token, refresh_token, user
POST /auth/refresh — refresh_token → new access_token
POST /auth/logout — Invalidate refresh token
POST /auth/forgot-password — email → send reset link
POST /auth/reset-password — token, new_password
GET /auth/me — Current user profile + memberships

3. Organization & Site

GET /organizations/current — Current org details + settings
PATCH /organizations/current — Update org settings (Admin)
GET /sites — List sites for current org
POST /sites — Create site
GET /sites/:id — Site detail
PATCH /sites/:id — Update site
DELETE /sites/:id — Soft delete / archive

4. Cameras

GET /cameras — List cameras (filter by site_id)
POST /cameras — Add camera (rtsp_url, name, site_id, config)
GET /cameras/:id — Camera detail + health
PATCH /cameras/:id — Update name, config, zones, thresholds
DELETE /cameras/:id — Remove camera
POST /cameras/:id/test — Test RTSP connectivity
GET /cameras/:id/snapshot — Latest snapshot (if available)

5. Alerts

GET /alerts — List alerts (filters: site, type, severity, status, from, to)
GET /alerts/:id — Alert detail + clip signed URL
POST /alerts/:id/acknowledge — Acknowledge alert
POST /alerts/:id/resolve — Resolve with optional note
POST /alerts/:id/false-positive — Mark as FP with optional feedback
POST /alerts/:id/escalate — Escalate to higher role / external

6. Users & Members

GET /members — List org members
POST /members/invite — Invite by email + role
PATCH /members/:id — Change role or site scope
DELETE /members/:id — Remove member

7. Edge / Internal (Service Auth)

POST /internal/events — Edge posts detection event + clip metadata

POST /internal/heartbeats — Edge node heartbeat

GET /internal/cameras/:id/config — Pull latest config for edge

8. WebSocket

Endpoint: `wss://api.drishyam.example/ws?token=`

Events server → client: `alert.created`, `alert.updated`, `camera.health`, `system.notification`

Client can send: `subscribe.site`, `unsubscribe.site` (optional room pattern)

9. Example: Create Alert Event (Internal)

```
{"camera_id":"uuid","alert_type":"weapon","severity":"critical","confidence":0.91,"detected_at":"2026-09-13T15:30:00Z","clip_path":"clips/org/site/uuid.mp4","metadata":{"bbox":[100,200,300,400],"duration_ms":1200}}
```

10. Status Codes

- 200 OK
- 201 Created
- 400 Bad Request (validation)
- 401 Unauthorized
- 403 Forbidden
- 404 Not Found
- 409 Conflict
- 429 Too Many Requests
- 500 Internal Server Error
