From Footage to Action

Business Logic Document

Rules, Workflows & Scenario Handling

Document ID: DRISHYAM-BL-001

Version: 1.0 | 13 September 2026

Confidential – For Development Use Only

1. Alert Lifecycle

States: new → acknowledged → resolved | false_positive. Critical alerts cannot skip acknowledgment. Time-to-ack and time-to-resolve are recorded for metrics.

2. Severity Assignment

- weapon, violence → critical
- intrusion (restricted zone) → high
- loitering → medium (configurable)

Severity can be overridden by site policy in future.

3. Notification Rules

Notify all Operators and SiteManagers with scope over the camera's site. OrgAdmins can opt in to all critical alerts. Quiet hours optional per user (future).

4. False Positive Feedback

When marked FP, store reason code + free text. Optionally feed into threshold tuning or model retraining pipeline (offline). Do not auto-delete the clip.

5. Retention

Clips and alert media deleted after organization.retention_days (default 30). Alert metadata may be retained longer for reporting (configurable). Soft-deleted cameras hide from UI but keep historical alerts.

6. Multi-tenancy Isolation

Every query for tenant data must filter by organization_id derived from the authenticated user's membership. Cross-org access is impossible by design except for SuperAdmin.
