

DRISHYAM

From Footage to Action

Developer Setup & README

Installation, Structure, Commands

Document ID: DRISHYAM-DEV-001

Version: 1.0 | 13 September 2026

Confidential – For Development Use Only

1. Repository Structure (Suggested)

```

drishyam/
├── apps/
│   ├── web/           # Next.js dashboard
│   ├── mobile/        # React Native / Flutter
│   └── edge-agent/     # Python edge inference service
├── services/
│   ├── api/           # NestJS or FastAPI backend
│   └── notification/  # Optional separate worker
├── packages/
│   └── shared/         # Shared types, utils
├── infra/
│   ├── docker/
│   └── k8s/
├── docs/              # These PDFs + OpenAPI
└── README.md

```

2. Prerequisites

- Node.js 20+
- Python 3.10+
- Docker & Docker Compose
- PostgreSQL 15 (or Docker)
- Redis 7 (or Docker)
- Git

3. Local Setup (High Level)

1. Clone repo && copy .env.example to .env (api, web, edge)
2. docker compose up -d postgres redis minio
3. Install API deps, run migrations, seed demo org
4. Start API + Web in dev mode
5. (Optional) Start edge-agent against a sample RTSP or file source

4. Key Environment Variables (Examples)

- DATABASE_URL=postgresql://...
- REDIS_URL=redis://...
- JWT_SECRET=...
- JWT_REFRESH_SECRET=...
- S3_ENDPOINT=... S3_BUCKET=... S3_ACCESS_KEY=... S3_SECRET_KEY=...
- EDGE_SERVICE_TOKEN=...
- FCM_SERVER_KEY=... (mobile push)

5. Common Commands

- npm run dev (web)
- npm run start:dev (api)
- python -m edge_agent (edge)
- npm run db:migrate
- npm run test
- docker compose -f docker-compose.prod.yml up

6. Development Workflow

Feature branches → PR → CI (lint, typecheck, unit tests) → Review → Merge to main → Auto deploy to staging. Production deploy via tagged release or manual approval.
