

DRISHYAM

From Footage to Action

Deployment Document

Environments, Config, CI/CD, Production

Document ID: DRISHYAM-DEPLOY-001

Version: 1.0 | 13 September 2026

Confidential – For Development Use Only

1. Environments

- local (Docker Compose)
- staging (cloud or on-prem)
- production

2. Required Secrets / Env

DATABASE_URL, REDIS_URL, JWT secrets, S3 credentials, EDGE_SERVICE_TOKEN, push notification keys, any third-party AI keys. Managed via secret manager or sealed env files — never in image layers.

3. Database Setup

Run migrations on deploy. Seed only in non-prod. Automated daily backups + point-in-time recovery preferred. Connection pooling (PgBouncer or built-in).

4. Edge Deployment

Package edge-agent as Docker image or systemd service. Provision with org/site credentials and camera list (or pull config). Monitor heartbeats. Support remote config update and model hot-swap where possible.

5. CI/CD Outline

On PR: lint, typecheck, unit tests. On main: build images, push to registry, deploy to staging. Production: manual approval or tagged release → rolling update.

6. Production Checklist

- TLS certificates valid
- Backups verified
- Monitoring & alerting live
- Rate limits configured
- CORS origins correct
- Edge nodes enrolled and healthy
- Retention job scheduled
- Incident runbook available
