

DRISHYAM

From Footage to Action

UI/UX Specification

Screens, Components, States, Navigation

Document ID: DRISHYAM-UI-001

Version: 1.0 | 13 September 2026

Confidential – For Development Use Only

1. Primary Screens (Web)

Login / Accept Invite: Email + password or invite token. Error states for invalid credentials.

Dashboard Home: Alert feed (real-time), summary KPIs (open critical, cameras online), quick live grid.

Live View: Multi-camera grid or single expanded view with status badges.

Alerts List: Filterable table/cards: severity, type, site, status, time. Click → detail.

Alert Detail: Video player (clip), metadata, timeline, action buttons (Ack / Resolve / FP / Escalate), activity log.

Cameras: List + status. Add/Edit drawer or page with RTSP, zones overlay, class toggles.

Sites & Organization: Site list, org settings, retention, members management.

Members: Invite, role assignment, deactivate.

Settings / Profile: User profile, notification preferences, password change.

2. Key Components

- AlertCard / AlertRow
- SeverityBadge
- CameraStatusDot
- LiveGridTile
- ZoneDrawer (canvas overlay)
- ClipPlayer
- EmptyState
- LoadingSkeleton
- ConfirmDialog
- Toast / Notification

3. States

Every data view must define: Loading (skeleton), Empty (illustration + CTA), Error (retry), Success/Populated. Buttons: default, loading, disabled. Forms: validation inline + summary.

4. Navigation

Left sidebar (collapsible): Dashboard, Live, Alerts, Cameras, Sites, Members, Settings. Top bar: org switcher (if multi-org later), user menu, notification bell. Mobile: bottom tab or hamburger + push-driven alert entry.

5. Responsive Behavior

Desktop-first for control room use. Tablet: usable grid and alert handling. Mobile: optimized for alert review and quick actions; live grid secondary.

6. Accessibility & Visual

Sufficient contrast for severity colors. Keyboard navigable critical actions. Clear focus states. Avoid relying on color alone for status.
